Cybersecurity for YOU

Enterprise-class I.T. protection for the small- to mid-size company

Nearly every company in operation today runs the bulk, or entirety, of its workflow on computerized systems. Those I.T. systems allow companies like yours to increase efficiency and compete head-to-head with similar businesses throughout the world.

The downside to your I.T. environment is that it must be secured, or everything—your data, workflow, and confidential client information is at risk.

Smaller businesses are NOT immune to cyberattack

Because enterprise-level organizations have fortified their I.T. environments, cybercriminals have pivoted to target the less protected small- to mid-size companies in recent years. In fact, 43% of cyberattacks are directed toward the small business.[1]

That's where our team of cybersecurity professionals can help. We provide comprehensive, robust I.T. security measures that help you protect your business while simultaneously leveraging the benefits of digital workflow and advanced productivity tools.

Guard against:

> Unauthorized access to your data

> Phishing

> Ransomware

> Internal corporate espionage

> Malware (viruses)

> Malicious hacking

Implement best-practice protocols:

> Management of updates and patches

> Data backup and protection strategies

> Secure remote workflow access options

> Antivirus and firewall configuration and monitoring

> Incident response and mitigation

> Email security measures

> Network security management

Enterprise-class protection for your business—without the enterprise-class price tag

By partnering with our team for I.T. security management, your business can utilize the protective power of top-of-the-line cybersecurity tools and personnel. Since we can spread the high cost of enterprise-class cybersecurity tools and I.T. specialists across our client base, we offer best-in-breed security solutions to small and mid-size companies like yours within a simple monthly payment structure.

The benefits of outsourcing your cybersecurity to a team of I.T. protection specialists

> Faster breach event recovery

> Increased stakeholder confidence

> Peace of mind

> Protection of brand reputation

> Access to a full stack of cybersecurity solutions and specialists

> Ability to safely utilize work-from-anywhere technologies

> Increase efficiency by eliminating nuisance phishing, adware, and spyware

Strengthening your weakest link – employee cybersecurity awareness training

Untrained staff can inadvertently allow cybercriminals access to your I.T. systems, your company's data, and your customers' confidential information. To help mitigate this risk, our team provides an array of training options for your employees, helping them stay safe while using internet-connected or cloud-based workflow.
